GREATUNIHACK 2026 · NATWEST CHALLENGE

Future You

Hear from yourself three months from now, before money trouble hits.

AI-Powered Financial Inclusion and Resilience

Nulara · Melanius · Ammar · Ibrahim

THE PROBLEM

Irregular pay breaks standard budgeting

Every month is different

Delivery riders, zero-hours and shift workers cannot plan around a salary that isn't there.

Shortfalls arrive unseen

Apps show where money went, so people find a gap only after it hits.

Language is a barrier

Written English and finance jargon shut many people out of the tools meant to help.

Future You looks 90 days ahead instead.

WHO IT'S FOR

Meet Adam, our demo persona

Adam, 27, delivery rider in Manchester

Speaks Arabic. Sends £100 a month home to Libya, so his home currency is LYD.

- Weekly pay: £230 to £420
- Rent: £600 a month
- Car insurance: £690, due 4 Jan

A fictional persona with 14 weeks of realistic history

FORECAST: FROM THE WEEK OF 4 JAN

£143

short in a run of slow weeks

Rent and car insurance fall in the same week.

Fix: save £16 a week for 9 weeks

Output of our forecast code on Adam's data

HOW IT WORKS

Four steps from forecast to action

STEP 1

Forecast

Code reads past pay and bills and predicts 90 days ahead.

STEP 2

Future You speaks

A voice message in the user's own language explains the risk.

STEP 3

Coach

Talk or type it through. Get a simple plan and free help links.

STEP 4

Proactive

It appears on its own when a risk is found, before the gap.

LIVE DEMO · 3 MINUTES

Follow Adam through his next three months

1. Pick a language and home currency
2. Dashboard in pounds and home currency, read aloud
3. Future You explains the January shortfall
4. Drag the time-travel slider to the red week
5. Ask the coach out loud, hear the answer in Arabic

SAFEGUARDS

Code does the maths. AI explains it.

Forecast code
Calculates every number

→

n8n
Runs the workflows and holds the keys

→

Claude
Explains the numbers in the user's language

→

ElevenLabs
Turns the text into speech

→

The app
Shows the chart and plays the voice

No regulated advice or product selling

Always labelled as AI

Points to free help: StepChange, Citizens Advice

API keys stay on the server, never in the app

BEFORE REAL CUSTOMERS

Should we deploy it?

Subgroup errors	We compare results by language and income pattern, not just the average. A mistake in Arabic counts as a failure.
Safeguards	Code makes every number and AI only explains. Labelled as AI, no regulated advice, links to free help.
Stop conditions	Set in advance: if the words don't match the forecast, show numbers only. If a language fails checks, switch it off.
Challenge culture	Anyone can question a result. We try to break the app, not just show it working.

Our answer: not yet. Pilot with human review first.

THE FIT

How Future You meets the NatWest criteria

Customer focus	Personalised to each person's own pay, bills and language
Innovation	Financial time travel: your future self calls before the gap
Social impact	Fairer access for underserved groups; every number explained
Use of AI and data	Code forecasts from history; AI explains it in your language
Feasibility	Designed to plug into Open Banking data

WHAT'S NEXT

Open Banking

Connect real transactions, with the customer's consent.

More languages

Hindi, Bengali and Urdu, each with a natural voice.

Free advice

Warm hand-offs to trusted, free advice services.

Safety pot

The same £16 a week builds a £500 buffer for the long term.

Know your next three months before they arrive.

IN SUMMARY

Future You warns people on irregular pay before money runs short.

Sees it coming

A 90-day forecast found Adam's £143 gap months early.

Speaks to you

In your own language and voice, with a plan of £16 a week.
